

# STATEMENT

by High-Level Financial Technology Committee of ISEA Foundation

**1 August 2017 in U.N.**

## Survival Money and Human Rights of MobiDollar based on the earth's productivity

Good Afternoon, Sir, Madam, and all the distinguished representatives from UN Member states. My name is Sion Kim, a representative of High-Level Financial Technology Committee of ISEA Foundation in South Korea, which is one of NGOs.

First of all, I would like to express the greatest gratitude for me to have this opportunity to share my statements and my deepest thanks to the United Nations and all member states for continuously supporting and praying for South Korea.

After World War II in 1945, the Republic of Korea obtained independence. But we still had to re-construct the country that was collapsed by the war. However, in 1950, South Korea had to go through Korean War with North Korea and suffer again. In this critical situation, the United Nations and member states quickly helped us, taking part in the war with waving Flag of the United Nations.

During the three years of Korean War, Korean Peninsula was again ruined. And, many foreign reporters said "there is no hope and there is no tomorrow in Korea". Also, the UN Forces Commander, General MacArthur said that "it is going to take more than 100 years to re-establish this country".

However, the United Nations never gave up on South Korea. According to the statistics, South Korea received 12.7 billion dollars at that time from UN. And Today, South Korea's economy not only has grown to the 12th strongest GDP, but also "Today's South Korea", "My organization", and "Myself" could stand right now and right here at this very honorable moment. I thank you all again.

So, now it is time for myself as a representative of my organization and my country to pay back what we have owed to UN, all the member states, and human beings who still suffer from extreme poverty.

Today, we are facing the 4th industrial revolution era, and South Korea is standing as the leader of IT. The world is currently living in a highly automated system along with the technological development, not only such as big data, IoTs, virtual reality, and artificial intelligence, but also blockchain technology-based virtual currency like Bitcoin. That is why, stepping along with these technological developments, ISEA Foundation has realized that we have to approach solutions to poverty with new method, and we have been developing and simulating a virtual currency for the last three years.

As we all know, all financial resources are under the control of the state and financial institutions. However, in this 4th industrial revolution era, virtual currency has been introduced, which there are no owners. So financial institutions from other countries, such as UBS, Dutch Bank, Santander, BNY Mellon are planning to develop blockchain-tech based currency. Also, in this January, a Chinese organization, called "WADCC" has discussed the importance and potential of virtual currency on an official UN Meeting and said that they already issued Alcoin and McCoin, trying to be recognized as United Nations' official virtual currency.

To us, Non-Governmental Organizations, Block-Chain technology is new opportunity for all human beings to restore their human rights for survival. And our organization is calling it as "Survival Rights". Basically, virtual currency is generated by mining activity and automatically produces money. And the "Survival money", mobidollar is based on the earth's productivity, which can provide for 12 billion people. That's why, ISEA organization is developing and advancing this technology, And trying to distribute it to people living in extreme poverty and help them enjoy their human dignity and basic human rights. And we call our virtual currency as "MobiDollar".

Furthermore, we want to give out the authority to control to the United Nations, UN Member states and NGOs in order for MobiDollar to be equally distributed to the regions and those who are in need.

The fundamental point of 2030 Agenda and 17 Sustainable Development goals is "Leaving No one Behind". Since 1990, UN has saved one billion people from extreme poverty, but still 800 million people are still left and waiting for us to save them. The basic human needs, like food, shelter, clothes and education are still the privileges that are very difficult for them to obtain. However, these basic human needs and dignity should never be a privilege to only a certain people because we are all born equal and have rights to life.

Therefore, our organization needs your support and pray for the survival money, Mobidollar in order to leave no single person behind.

And finally, the goals of MobiDollar can only be achieved by the immediate agreement of the representatives of the member states and NGOs, sitting here at this very moment, who have good wills and good purposes for human beings and our future generations, and our goals should not be limited by the law of nations.
